ABOUT ME

I am a perfectionist person who does not settle easily. Passionate about technology, I always try to be busy learning new things with courses and tutorials. I love both the treatment and teamwork and the moments of maximum concentration on a particular task on my own.

I have spent most of my career focused on the back-end with Java and various types of databases, although now I am focused on learning and developing with Angular, Python and MongoDB, cutting-edge and current technologies that have caught my attention.

I would love to be able to become part of a company that allows me to continue learning, which is the most important thing for me, which at the same time allows me to continue developing professionally and gives me the opportunity to focus my career on full-stack development.
